Finding periodical articles using UI Library article databases
Databases useful for searching for articles on a topic (or by an author) can be found using the links circled or the pulldown on the Library’s website: www.lib.uidaho.edu. Many specialized databases of scholarly articles are available. Click or select to be connected to the database.
Academic Search Premier (from a company named Ebsco) is a good choice for many topics of research, as it covers many subjects, and links to both popular and scholarly articles.
If you click on “Choose databases,” you can add and subtract other Ebsco databases to see more specialized sources, or perhaps specific formats (such as book reviews).
Type your search terms (2-3 keywords recommended) into the box. You will have options for limiting on the next screen.

Use this link to return to the library home page.
The result list will likely include a mix of scholarly and popular articles. Adding article citations to a folder will make it easy to save or email them later.

Many ways to narrow your search

Click title to see more information and abstract.

Full text available

Popular article

Scholarly article

Click this to add citation to a folder
The full record for the article provides more information and options.

Click the source (periodical) title to find out more about this publication, including if it is popular, scholarly or written for a particular audience.

These subject terms might be helpful for more precise searching

Click to find out how to cite this article

Abstract or summary helps you determine relevance.

You can click on the author’s name to find more articles by that author.
The “Find it” icon near an article is different than the other full text icons. It means the system will check to see if UI students have access to the full text of the article. It may find that immediate access to that article is NOT available.
After clicking the “Find it” icon, the next screen indicates that this article is not available in full text through our library subscriptions. However, you can order it for free from Interlibrary Loan (ILL). It will be sent to your account as a scanned document within 1-3 days. If you have never used ILL, you will first set up an account using the “First time users” link. You need to have a barcode from your Vandal ID card.
This article is available. You can link to the full text of this article by clicking on the link(s) listed after “Full text available at…”

A green dot indicates that the item is available.

Click on this link, and links following, to get to the full article.
Other article databases work in similar ways, though they may have different options and results. You can find other databases using this page, or through our Research Guides. Librarians are also glad to help you find the best databases to search.
If you have any questions, please be sure to contact a librarian for help.
